

SILENT WAKE - CYOP

Role Sheet

February 2026

NAVAL
GROUP

1 Mission

Interpret cyber signals as operational risk and propose proportionate mitigation that preserves mission tempo.

2 Responsibilities

- Differentiate likely cyber compromise vs noise/failure; communicate confidence level.
- Identify likely propagation paths between systems (IBMS / INS (incl. WECDIS) -> ASUW TRACKING RADAR, NAV SENSORS -> picture -> engagement).
- Propose mitigations with clear tradeoffs: isolate, disconnect, switch to degraded mode, restore/rollback.
- Prevent paralysis: propose “good enough” containment when certainty is impossible.

3 Authority and Limits

- You recommend; CO decides.
- No SOC. You cannot request an external patch or CTI fix. You must work with onboard options.
- Focus is on mission continuity and not cyber attack investigation

4 Pedagogical Note

Your goal is not to win cyber. Your goal is to keep the ship effective while uncertainty remains.
